

# Call For Research Participants

## Are You Looking to Inform the Design of a Brain Training Game's Learning Features with Your Interests?

---

A brain training game is a game that offers players cognitive tasks to complete in a repetitive manner. I am looking for participants for a research study (dissertation) who are interested in informing my efforts to design a brain training game's learning features based on the expressed interests of the people who want to play such games.

The researcher is looking for interested participants who meet the following criteria:

- Individuals aged 18 years and up.
- Individuals with or without a diagnosis of a neurodevelopmental condition like Autism or ADHD are all welcomed!
- Be able to commit up to but no more than 8 hours of participation in this study (not all in one sitting).
- Participate in an initial interview, written correspondences, playing a working version of the game, an interview about your interactions with and perceptions about the working version of the game, and journaling opportunities about your interactions with and perceptions about the working version of the game.

To apply to be a participant, you can scan the QR Code above, or visit the following survey link:
